

How to use Skyline Pulse

No login, no account, no training needed. This page walks through the Home page, logging a Sunday service, Production, SkyYouth, Calendar, Analytics, Exports, Church Stats, and Planning Center Responses — in plain steps, with pictures.

1 Getting there

Skyline Pulse lives at one shared link — there's nothing to install and nothing to sign up for.

1

Open the app link

Ask your team lead for the link, or use skylinechurchpulse.pages.dev. Bookmark it — you'll come back every week.

2

No login required

Anyone with the link can view and log entries. The only thing you'll type is your name, in a "Logged by" field, so the team knows who entered a given day's numbers.

3

Works on your phone

The whole app is mobile-friendly, so logging a service from your phone right after it ends works just as well as on a laptop.

4

Lost? There's a Help button

A **Help** link sits in the tab bar on every page and always opens this guide in a new tab. It gently pulses the first few times so it's easy to spot — the pulse stops for good on your device once you've clicked it.

The Home page

This is what you see first when you open the app — a welcome overview, not a work queue.

1

Headline stats

How many Services, SkyYouth, and Production entries are logged, how many Planning Center Plans are still upcoming, how many serving requests have been responded to vs. still need one, and — once there's enough data — average attendance, unity, and engagement.

2

An attendance trend

A quick chart of the last several services, once at least two are logged.

3

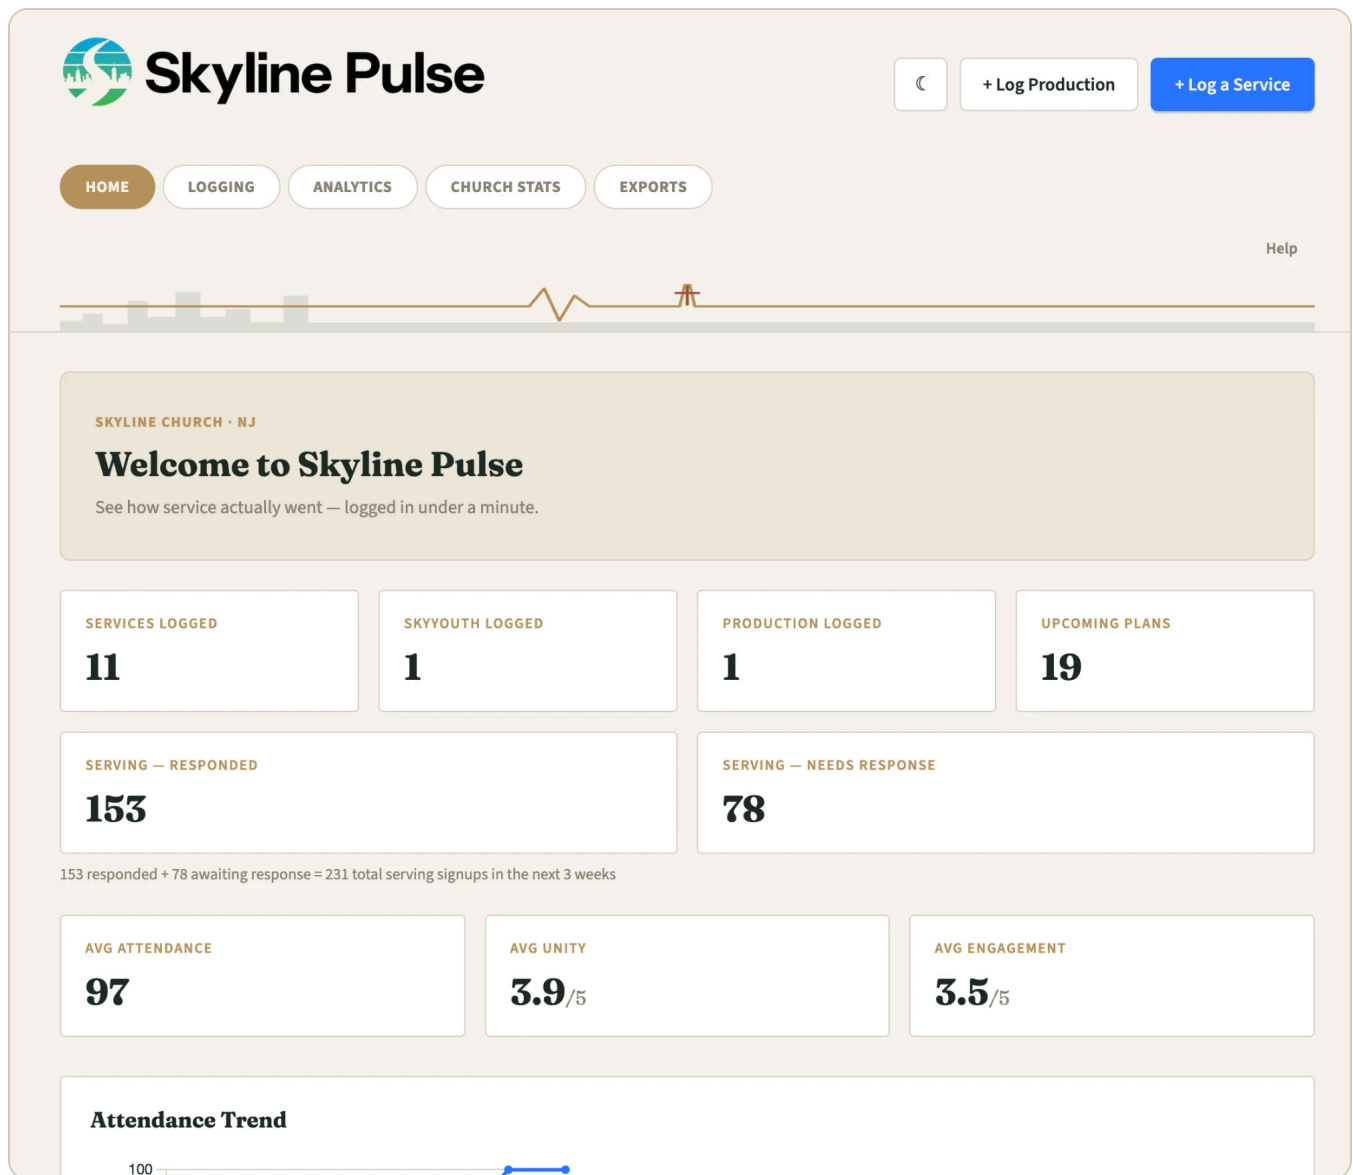

Recently logged

The last few entries across Services and Production, so it's obvious the app is live and being used.

4

Jump-in cards

One card per tab — Sunday Services, Production, SkyYouth, Calendar, Analytics, Exports — click any card to go straight there. The logo in the header also brings you back Home from anywhere.

The Home page — everything at a glance, then a card per tab

3 Log a Sunday service

This is the main thing most people will do. It takes about a minute, and Pulse already knows your services because it reads them from Planning Center.

1 Open the **Sunday Services** tab

Click **Logging** at the top, then **Sunday Services** — it's the first tab there. (Or click its jump-in card right on the Home page.)

2

Find your service in the list

Every upcoming and recent Plan from Planning Center shows up automatically — with its date, sermon art, and service badge (like **9:30 AM** or **11:00 AM**). Need something further back? **↓ Load older services** at the bottom of the list pulls in another month of history each click, up to about 4 months back.

3

Click **Needs details**

This button appears on the right once a service has actually happened. (Future services show a grayed-out **Upcoming** pill instead — nothing to log yet.) Already logged one for this Plan? The button says **+ Log another** instead, for a second service time.

The screenshot shows the Skyline Pulse interface. At the top, there's a navigation bar with the Skyline Pulse logo, a back arrow, and buttons for '+ Log Production' and '+ Log a Service'. Below this is a secondary navigation bar with tabs for LOGGING, ANALYTICS, and EXPORTS. Under LOGGING, there are sub-tabs for Planning Center, Production, SkyYouth, Services, and Calendar. The main content area is titled 'Planning Center — Plans' and includes a 'Refresh' button. Below the title, there are filters for 'All (9)', '11:00 AM (4)', '9:30 AM (4)', and 'Worship Night (1)'. The main table lists plans with columns for DATE, PLAN, and action buttons. The plans are as follows:

DATE	PLAN	Action
Jun 11, 2026	WORSHIP NIGHT Worship Night · Rooted	Worship Night ✓ + Log another
Jun 21, 2026 9:30 AM	9:30 AM Celebration Service · Rooted	9:30 AM ✓ + Log another
Jun 21, 2026 11:00 AM	11:00 AM Celebration Service · Rooted	11:00 AM ✓ + Log another
Jun 28, 2026 9:30 AM	9:30 AM Celebration Service · Rooted	9:30 AM ✓ + Log another
Jun 28, 2026 11:00 AM	11:00 AM Celebration Service · Rooted	11:00 AM ✓ + Log another
Jul 12, 2026 9:30 AM	9:30 AM Celebration Service · Rooted	Needs details
Jul 12, 2026 11:00 AM	11:00 AM Celebration Service · Rooted	Needs details
Jul 19, 2026 9:30 AM	9:30 AM Celebration Service · Rooted	Upcoming

The Sunday Services tab — your Plans, pulled straight from Planning Center

The screenshot shows the 'Log a Service' form in the Skyline Pulse application. The form is a modal window with a close button (X) in the top right corner. It contains the following sections:

- Date:** A date picker showing '07/14/2026'.
- Service *:** A dropdown menu with the text 'Select a service...'.
- Attendance (headcount):** A text input field with the placeholder 'e.g. 214'.
- Oneness in One Voice (worship unity) — 3/5:** A horizontal slider.
- Audience Engagement — 3/5:** A horizontal slider.
- Loudness (dB):** A text input field with the placeholder 'e.g. 92'.
- ROOM EXPERIENCE:**
 - Sound blends well in the back (can't tell where it's coming from):** A dropdown menu with 'Yes' selected.
 - Spiritual response, standing 2/3 back — 5/10:** A horizontal slider.
 - Transitions gave clear inspiration to respond — 3/5:** A horizontal slider.
- SERVICE FLOW:**
 - Lighting fit the song:** A dropdown menu with 'Yes' selected.
 - Talking/host segments flowed well:** A dropdown menu with 'Yes' selected.
 - Announcements landed well:** A dropdown menu with 'Yes' selected.
 - Sermon/message connected:** A dropdown menu with 'Yes' selected.

The background shows the Planning Center interface with a table of plans and a sidebar with navigation options like LOGGING, ANALYTICS, and EXPORT.

The Log a Service form

4 Check the attendance number

If your church uses Planning Center Check-Ins, the headcount often fills in automatically with a **From PCO** tag. Change the number and it switches to **Overridden** — it's always yours to correct.

5 Fill in the rest

Worship unity, audience engagement, and loudness (dB) up top; sound clarity, spiritual response, and transitions under **Room Experience**; whether lighting, talking segments, announcements, and the sermon landed under **Service Flow**. Notes are optional.

6 Type your name in **Logged by**

Required — it's how the team knows who entered a given Sunday's numbers. Start typing and your name will autocomplete next time.

7

Click **Save Entry**

That's it — the service now shows a green checkmark pill back on the Sunday Services list.

Can't find your service in the list? Use the + Log a Service button in the top-right corner of the app instead — it opens the same form without a Planning Center Plan attached, so you pick the date and service type by hand.

FIELD	WHAT IT MEANS
Attendance	Total headcount for the service. Auto-fills from Check-Ins when available.
Worship unity	1–5: how "one voice" the room felt during worship.
Audience engagement	1–5: how engaged the room was overall.
Loudness (dB)	Measured or estimated sound level for the service.
Sound clarity	Yes/No — can you tell where the sound is coming from at the back of the room? (Yes means it blends well.)
Spiritual response	0–10, judged from 2/3 of the way back in the room.
Transition clarity	1–5: did transitions give clear inspiration to respond?
Service flow (4 fields)	Yes/No each for lighting, talking segments, announcements, and the sermon — did they land as planned?

4

Log Production (tech team)

A separate log for the tech side of the service — who ran what, and how the visuals/camera work went.

1

Click **+ Log Production**

It's in the header next to **+ Log a Service**, or use the same button on the **Production** tab.

2

Pick the date and service

Same service list as the main log — **9:30 AM** , **11:00 AM** , and so on.

3

Mark who covered each role

Lights, camera, director, computer/ProPresenter, and audio — mark each Yes/No and type who was on it. Names autocomplete from past entries.

4

Grade the slides (1–4) and count misses

A "miss" is: a slide shown at the wrong time, a missed video/text cue, or a lyric slide that changed too slowly (it should advance on the second-to-last word). This feeds the Slides Leaderboard in Production Analytics.

5

Add your name and save

Same **Logged by** requirement as the main log.

The Production tab — role attendance and fit checks at a glance

5

SkyYouth

SkyYouth gets its own tab, its own Planning Center feed, and its own analytics — it's never mixed in with Sunday morning numbers.

The screenshot shows the Skyline Pulse interface with the SkyYouth tab selected. The top navigation bar includes 'LOGGING', 'ANALYTICS', and 'EXPORTS'. Below this, the 'Planning Center' section is active, showing a 'SkyYouth' tab. The main content area displays 'SkyYouth — Plans' with a 'Refresh' button. A table lists three plans for 'SkyYOUTH Gathering' on dates Jun 28, 2026, Jul 12, 2026, and Jul 19, 2026. Each plan has a 'SkyYouth' status and a 'Needs details' button. The footer contains links for 'About Skyline Pulse', 'Skyline Church Website', 'Planning Center - Events', and 'Planning Center Plans', along with a copyright notice for Skyline Church - NJ.

DATE	PLAN	
Jun 28, 2026	SKYYOUTH SkyYOUTH Gathering	SkyYouth ✓ + Log another
Jul 12, 2026	SKYYOUTH SkyYOUTH Gathering	Needs details
Jul 19, 2026	SKYYOUTH SkyYOUTH Gathering	Upcoming

The SkyYouth tab works exactly like Sunday Services

Click the SkyYouth tab under **Logging**, and follow the exact same steps as logging a Sunday service — find the plan, click **Needs details**, fill in the form, save. Nothing new to learn.

6

Calendar: viewing, editing & deleting

The Calendar tab is where you go back and check — or fix — anything already logged.

The screenshot displays the Skyline Pulse web application interface. At the top, the logo "Skyline Pulse" is on the left, and navigation buttons "+ Log Production" and "+ Log a Service" are on the right. Below the logo, there are tabs for "LOGGING", "ANALYTICS", and "EXPORTS". A secondary navigation bar includes "Planning Center", "Production", "SkyYouth", "Services", and "Calendar" (which is highlighted). A horizontal bar with a waveform icon spans the width of the page below the navigation tabs.

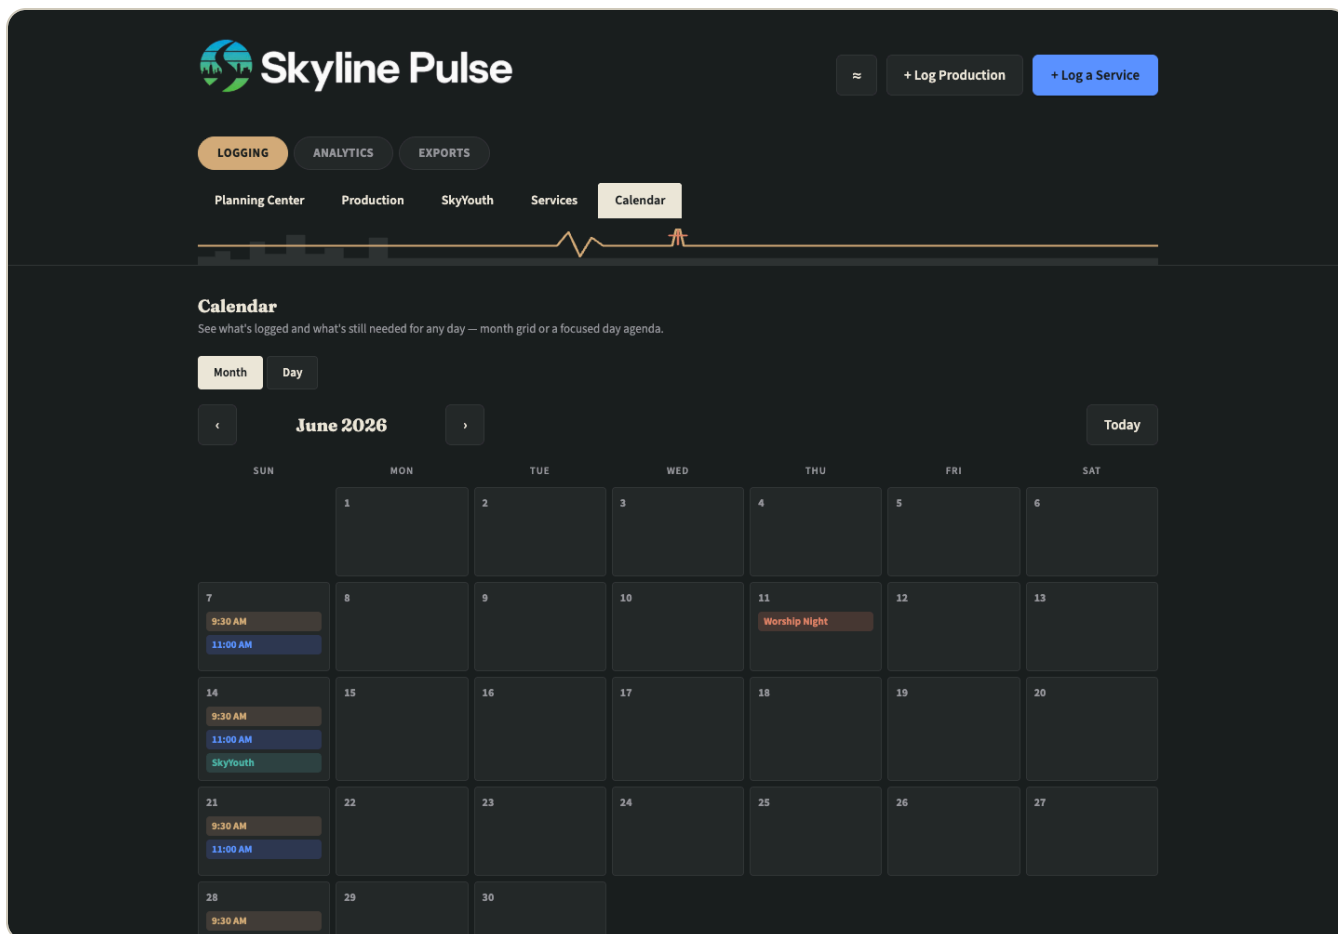

The main content area is titled "Calendar" with the subtitle "See what's logged and what's still needed for any day — month grid or a focused day agenda." Below this, there are buttons for "Month" and "Day" (the "Day" view is selected). Navigation arrows and the date "Sunday, June 7, 2026" are shown, along with a "Today" button. A summary line indicates "2 of 2 logged · Combined attendance: 463".

Two logged events are listed:

- 9:30 AM** (orange header): **198 attendance** **3/5 unity** **3/5 engagement** **89 dB**. Logged by Morgan Lee. A "Logged ✓" button is on the right.
- 11:00 AM** (blue header): **265 attendance** **4/5 unity** **4/5 engagement** **89 dB**. Logged by Jordan Reyes. A "Logged ✓" button is on the right.

The footer contains links: "About Skyline Pulse", "Skyline Church Website", "Planning Center · Events", and "Planning Center Plans".

Day view — everything logged for one Sunday, at a glance

Month view — see what's covered and what's still missing

1

Switch between Month and Day view

Month is best for spotting gaps at a glance; Day view is built for reviewing one Sunday's full set of logs.

2

Click any logged service

Opens the same form you used to log it, pre-filled — fix a typo, correct the attendance number, anything.

3

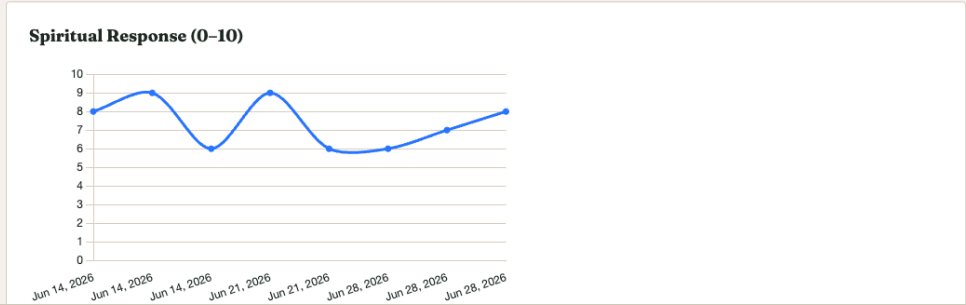

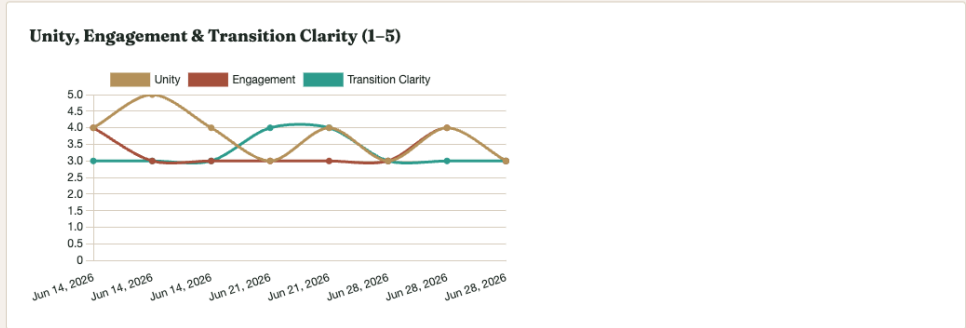

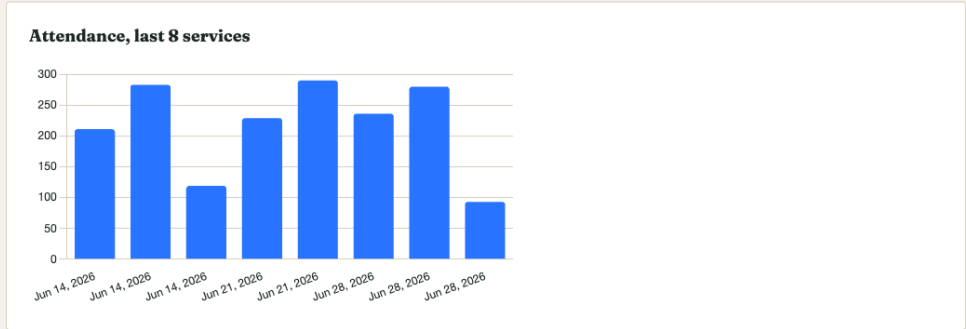

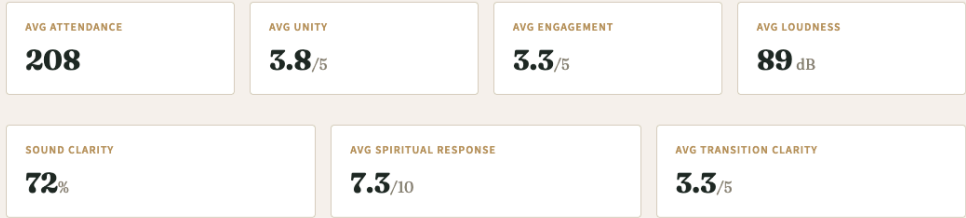

Delete if needed

A misclick isn't permanent — deleting shows an **Undo** option for a few seconds right after.

7

Analytics

Click **Analytics** at the top of the app to switch pages. There are three tabs — **Services**, **Production**, and **SkyYouth** — each with its own trend charts.

Production Analytics, including the Slides Leaderboard

Every chart tracks the last several services over time, and each view also shows a breakdown of who's been logging — nothing here needs setup, it's built from whatever's already logged.

8 Exports

Need the numbers outside the app — for a meeting, an email, or a spreadsheet? Click Exports at the top.

One card per dataset — pick a format

OPTION	BEST FOR
CSV	Opening in Excel or Google Sheets
PDF table	A clean printable list to hand someone
Print report	The live charts — opens your browser's print-to-PDF dialog
Email report	Sending the PDF table straight to your Email Recipients list, no download step

Buttons gray themselves out automatically if there's nothing to export yet for that dataset.

Email Recipients

Scroll down on the Exports page to add or remove who receives emails — there's no fixed admin list. Anyone on it gets both the on-demand "Email report" sends above and an automatic weekly digest every Monday morning (Eastern), summarizing what got logged that week, who's still owed a Planning Center response, and the latest Check-Ins headcount.

9

Church Stats

Click Church Stats at the top for org-wide numbers pulled straight from Planning Center — separate from anything you log yourself.

1

Check-Ins Trends

An 8-week attendance chart split into regular attendance vs. guests, totaled across every Check-Ins Event — not just the ones matched to a Sunday Plan.

2

People & Membership

Active people, households, and how many new people were added in the last 30 days.

3

Serving & Volunteers

How many volunteers are scheduled over the next 3 weeks, a **Responded** vs. **Needs Confirmation** count (declining counts as a response — it's a no, not silence), and a "most scheduled" list. For the full breakdown of who's confirmed, declined, or hasn't answered, see Planning Center Responses below.

4

Some sections may say "not available"

Each section works independently — if the connected Planning Center account doesn't have access to one part (say, People but not Serving), that section just shows a short note instead of breaking the page.

No Giving numbers here, on purpose. This app has no login — anyone with the shared link sees whatever's on this page — so church financial data isn't something Church Stats shows.

Planning Center Responses

Click Planning Center Responses under Logging to see exactly who's confirmed, declined, or hasn't answered a serving request — one card per plan, not just the summary counts on Church Stats.

1

Grouped by service type, automatically

Cards are organized into one section per Planning Center service type actually present — Celebration Service, SkyYouth, and any others your organization uses — each correctly labeled with its real name, instead of a fixed Sunday/SkyYouth split. Nothing to configure.

2

Filter to one type

Click a chip at the top (like **SkyYouth**) to narrow the page down to just that section. Chips are single-select — click a different one to switch, or click the active one again (or **All**) to go back to seeing everything.

3

Needs Response, Declined, Confirmed

Each plan's card breaks its team into these three groups — Needs Response first, since that's the one worth following up on. A decline still counts as an answer; it's grouped separately from "hasn't responded yet."

4

Browse further back

Past plans show up here too, not just upcoming ones. **↓ Load older services** at the bottom pulls in another month of history each click, up to about 4 months back — same pattern as the Sunday Services/SkyYouth lists.

One limitation worth knowing: a multi-time Sunday folder like Celebration Service (9:30 and 11:00 as one Plan with two Plan Times) shows as a single combined card and chip — Planning Center tracks serving teams at the Plan level, not per service time, so there's no way to split that team roster further here.

11 Tips & FAQ

What does the **From PCO** / **Overridden** badge mean?

Skyline Pulse pulls attendance headcounts automatically from Planning Center Check-Ins where it can. **From PCO** means the number shown came from that sync; if you type a different number, it switches to **Overridden** so it's clear a person corrected it. Either way, the number always stays fully editable.

Why can't I log a service that hasn't happened yet?

By design — Pulse only lets you log details for services on or before today, so there's never a guessed number sitting in the ledger.

Do I need an account?

No. The app is one shared link — anyone with it can view or log entries. The "Logged by" field is just attribution, not a login.

I don't see attendance filling in automatically — is something broken?

Not necessarily. If your organization hasn't connected Planning Center Check-Ins (or the connected account doesn't have access to it), the app shows a banner explaining that on the Sunday Services tab, and you just enter the headcount by hand — everything else works the same.

Can I change how the app looks?

Yes — the theme button (moon icon) in the top-right cycles through Light, Dark, and Ocean. Your device remembers whichever one you pick.

I made a mistake after saving — now what?

Open the Calendar tab, click the entry, and either edit it directly or delete it (with a few seconds to Undo).

The Help button used to pulse/glow — why did it stop?

That's expected, not a bug. The pulse is a one-time "notice me" cue — the first time you click Help on a given device, it stops for good on that device so it's not distracting once you already know where it is. If you want to see it pulse again (e.g. to double-check it for someone else), open the app in a private/incognito window, a different browser, or clear that device's site data for the app.

Can I select more than one type at once on Planning Center Responses?

No — those filter chips are single-select on purpose. Click a type to narrow to it, click it again (or All) to clear it. With as many Planning Center service types as some organizations have, letting chips stack got confusing fast.

Who gets the weekly digest and "Email report" emails?

Whoever's listed under Exports → Email Recipients — add or remove addresses there any time. There's no separate admin-only list; anyone can manage it from the app.
